

INTRODUCE Living things and their habitats

Year ____ Term

Plants produce oxygen

Animals get their food by eating plants or other animals

Plants provide food for people and animals to eat

Food chain - the grass goes into the rabbit and the rabbit goes into the fox

prey — Animals that are eaten are called prey

producer — Plants make their own food and are producers

habitat - a natural environment or home of a variety of plants and animals

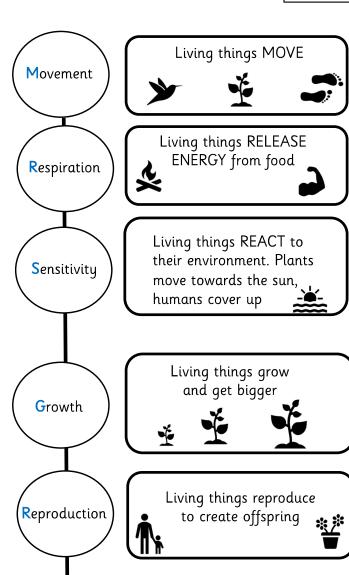

desert mountain ocean woodland

microhabitat - a very small habitat, for example woodlice under logs

Living things get rid of waste products

Nutrition

Living things need food.
Plants make their own.
Animals eat plants or
other animals

Remember
